

# As “GREEN” as it gets!

Without a world wide standard that officially defines “green”, it will remain a misleading “buzz word” used by “certification” companies and manufacturers. As it now stands, “green” has as many different meanings as there are shades of green. Touting a product as “green” *should mean* that it poses no risk to users or the environment, and that it conserves our natural resources, protects against waste, and minimizes its impact on water reclamation and waste disposal.

Thus, in terms of cleaning and keeping surfaces sanitary, “green” should mean easier, more effective product performance using fewer, safer chemicals that involve less packaging and less waste.

Unelko Corporation of Scottsdale, Arizona is doing just that with its innovative SANI-SHIELD® and SANI-SCRUB® 1-Step Surface Care technologies that clean and simultaneously shield surfaces against the adhesion & buildup of re-soiling for easier next-time cleaning and which prevents the growth of odor-causing bacteria, mold & mildew in-between cleaning. The products promote a reduced need for costly resource-consumptive chemicals and wasteful packaging. Steven Ohlhausen, President of Unelko, says, “Since you can’t prevent re-soiling and re-contamination, at least reduce the amount of time, effort and the cost of excess chemicals by protecting the surface against

everyday build-up of organic and inorganic soil, dirt and grime.”

Unelko is showing hospitals, nursing homes, hotels, schools, restaurants and other public facilities how they can “Clean Smarter, Not Harder” with its new cleaning & antimicrobial-resistant barrier coating technologies that takes the guesswork out of cleaning. Ohlhausen said, “We have shown companies how they can save up to 50% on their chemical purchases and even more on labor costs, while maintaining a cleaner facility. Many companies are not even aware of the ever increasing costs they are spending to maintain their facilities on a daily basis.”

And on the “pure green” side, SANI-SHIELD and SANI-SCRUB are warranted to be free of harsh acids or alkalis, phosphates, ammonia, glycol ethers, terpenes, hydrocarbon propellants, quaternary ammonium compounds, silver and chlorine bleach...and it says so right on each label.

Ohlhausen finished by saying, “You need considerably less cleaning chemicals to clean a shielded surface; sometimes even plain water and a microfiber towel is all you need to clean a surface previously treated with SANI-SHIELD or SANI-SCRUB. Now, *That’s as “Green” as it gets!* ■

# SANI-SHIELD® & SANI-SCRUB®

## 1-Step Surface Care Technologies.

**1. CLEAN** 99.% of organic soil with each use of the “spray & wipe” cleaner. Cleanser removes 99.9% of organic & inorganic soil with each use.

**2. SHIELD** surfaces with an antimicrobial-resistant water, soil & stain repellent barrier coating that reduces the adhesion & build-up of dirt & grime for easier next-time cleaning...and

**3. PROTECT** surfaces against the growth of odor-causing bacteria, mold & mildew in-between cleaning.

**The Only Products That  
Clean & Shield Today and Protect Tomorrow!**
